Number: 23-AN-002

Effective September 18, 2023, MacLean Power will begin featuring beveled leading edges on all helical products. This improvement will be gradually implemented as stock levels are replenished.

Field experience demonstrates that helixes equipped with beveled edges transition into soil more quickly and effectively for installers. As we strive to continually perfect our products and serve our customers in the field, the ideas and experiences of installers are central to our success. Therefore, we are implementing this change across all relevant products. Product inspectors should be alerted to this upgrade as needed.

The list below notes which product families will be affected by this change.

- No-Wrench Anchors
- Power Hub Anchors
- Turbo Drive Anchors
- Power Shaft Anchors
- Helical Piles
- Foundations

Please contact your MacLean customer account specialist for any further questions at 855-MPS-SHIP.
