

## Utility Driven Anchors - Duckbill

The 68-DBU and 88-DBU are the authorized Duckbill Utility (DBU) earth anchor models for use in the utility market. Used in temporary guying applications, these anchors can be installed quickly and without the use of machinery. Both models come fully assembled and ready to install. The assemblies include the anchor head and 42” of galvanized wire rope with a thimbleye above grade guy connection.

To install, place the respective 4’ heavy duty drive rod into the anchor and set the anchor at the desired angle. Drive the anchor fully into the ground using a mallet or small sledgehammer until only the thimbleye is above grade. Remove the rod and place it through the thimbleye. Pull upward to lock the anchor in the soil.

Description	Catalog Number	Wire Rope Dimensions	Maximum Working Load (lbs.)
68-DBU	20110-II	1/8" x 42"	1,100
88-DBU	20111-II	1/4" x 42"	3,000
68-DBU Drive Rod	50010	N/A	N/A
88-DBU Drive Rod	50078	N/A	N/A

Standard DBU earth anchor assembly

DBU earth anchors require minimal installation equipment and can be installed in a manner of seconds
